This product is a USB2.0 compatible terminal module that extends the analog I/O function of USB port of PCs. 8ch/16bits analog inputs and 2ch/16bits analog outputs are employed and signal lines can be directly connected to the screw terminals in the system. Compact design to match Note PCs and excellent in mobility as operation is powered by USB bus. This product accompanies Windows driver and full-fledged data logger software “C-LOGGER”. Possible to be used as a data recording device for MATLAB, with dedicated libraries.

Features

**Input 10μsec/ch, 8ch, output 10μsec, 2ch, 16bit resolution**

Equipped with the analog input (10μsec/ch, 16bit, 8ch), analog output (10μsec, 16bit, 2ch) and digital I/O (4ch each, LVTTL level)

Compatible to USB1.1/USB2.0 and not necessary to power this product externally as the bus power is used.

Compatible to USB1.1/USB2.0 and capable to achieve high speed transfer at HighSpeed (480 Mbps). Not necessary to power this product externally as the bus power of USB is used.

Equipped with the buffer memory (1K data) which can be used in either FIFO or ring format.

This product includes buffer memory (1K data each for analog input and output) which can be used in either FIFO or ring format. You can perform analog I/O in the background, independent of software and the current status of the PC.

**Windows compatible driver libraries are attached.**

Using the attached driver library API-USBP(WDM) makes it possible to create applications of Windows. In addition, a diagnostic program by which the operations of hardware can be checked is provided.

**Sampling can be driven by a clock or by various triggers**

Sampling can be started and stopped by software or by an external trigger (timing controlled by an externally input control signal). The sampling period can be controlled by the internal clock (high-precision timer included on the board) or by an external clock (externally input control signal).

**Terminal connector facilitating wiring**

Wiring is easy as the terminal connector (screw type) is used.

**Software-based calibration function**

Calibration of analog input/output can be all performed by software. Apart from the adjustment information prepared before shipment, additional adjustment information can be stored according to the use environment.

Common section

USB

Number of output channels: Unisolated output 4ch (LV TTL positive logic) * 4

Number of output channels: Unisolated output 4ch (LV TTL positive logic)

In the driver data software, the buffer memory is expanded to a 256 x 1024 data. *1

USB

Bus specification: USB Specification 2.0/1.1 standard

USB transfer rate: 12Mbps (Full-speed), 480Mbps (High-speed) *6

Power supply: Bus power

Common section

Connector: 14 pin (screw-terminal) plug header

Power consumption (Max.): 5VDC 450mA

Power consumption: 5VDC 450mA

Operating condition: 0 - 50°C, 10 - 90%RH (No condensation)

Operating condition: 0 - 50°C, 10 - 90%RH (No condensation)

Physical dimensions (mm): 64(W) x 62(D) x 24(H) (exclusive of protrusions)

Weight: 85g (Not including the USB cable, attachment)

Attached cable: USB cable 1.8m

Compatible wires: AWG28 - 16

*1 The non-linearity error means an error of approximately 0.1% occurs over the maximum range at 0°C and 50°C ambient temperature.

*2 When using the signal source equipped with the high-speed operational amplifier

*3 This numerical displays the conversion speed for A/D, D/A converter. The minimum executable sampling cycle depends on the operating condition of the terminal.

*4 You cannot use both the D101 / D102-pin of digital input feature and the external start / stop signal / external clock input simultaneously.

*5 Each input accepts TTL (5VDC) level signals.

*6 The USB transfer speed depends on the host PC environment used (OS and USB host controller).

*7 As a USB hub is also counted as one device, you cannot just connect 127 USB terminals.

*8 1K Data (1024 data) of buffer memory are implemented.

If (the number of channels) x (the number of samples) ≤ 1024 data, a sampling with an A/D converter's conversion rate of 10µ/sec/ch is available. However, the actual amount of data that can be stored in the buffer memory will decrease: one unit of data of the buffer memory is consumed per sampling as the internal status. The following is an image of the buffer memory:

Consequently, the relationship among the number of channels, the number of samplings, and the sampling clock that can be sampled as described in the specification of the hardware is as follows:

<table>
<thead>
<tr>
<th>Sampling channel</th>
<th>number of channel</th>
<th>number of sampling</th>
<th>Sampling clock</th>
</tr>
</thead>
<tbody>
<tr>
<td>0ch</td>
<td>1</td>
<td>512</td>
<td>10µsec</td>
</tr>
<tr>
<td>0-1ch</td>
<td>2</td>
<td>341</td>
<td>20µsec</td>
</tr>
<tr>
<td>0-2ch</td>
<td>3</td>
<td>256</td>
<td>30µsec</td>
</tr>
<tr>
<td>0-3ch</td>
<td>4</td>
<td>204</td>
<td>40µsec</td>
</tr>
<tr>
<td>0-4ch</td>
<td>5</td>
<td>170</td>
<td>50µsec</td>
</tr>
<tr>
<td>0-5ch</td>
<td>6</td>
<td>146</td>
<td>60µsec</td>
</tr>

<td>0-6ch</td>
<td>7</td>
<td>128</td>
<td>70µsec</td>
</tr>
<tr>
<td>0-7ch</td>
<td>8</td>
<td>113</td>
<td>80µsec</td>
</tr>
</tbody>
</table>

In the driver data software, the buffer memory is expanded to a 256 x 1024 data. However, if the number of samplings that exceeds the table above is specified, an adjustment of the sampling clock is required for the data transfer process from the device to the PC, which may prevent a sampling with the sampling clock above.

Support Software

Driver Library API-USBP(WDM) (Bundled)

It is the library software, and which supplies command of hardware produced by our company in the form of standard Win32 API function (DLL). Using programming languages supporting Win32API functions, such as Visual Basic and Visual C++ etc., you can develop high-speed application software with feature of hardware produced by our company. In addition, you can verify the operation of hardware using Diagnostic programs.

CONTEC provides download services (at http://www.contec.com/api-usbp/) to supply the updated drivers and differential files. Further details may be found in the help within supplied CD-ROM or the homepage of our company.

< Operating environment >

OS: Windows 7, Server 2008, Vista, XP, Server 2003, 2000, Me, 98, etc..

Data Logger Software C-LOGGER

(Supplied: Stored on the API-USBP(WDM) CD-ROM)

C-LOGGER is a data logger software program compatible with our analog I/O products. This program enables the graph display of recorded signal data, zoom observation, file saving, and dynamic transfer to the spreadsheet software "Excel". No troublesome programming is required.

CONTEC provides download services (at http://www.contec.co.jp/clogger) to supply the updated drivers. For details, refer to the C-LOGGER Users Guide or our website.

Accessories (Option)

Bracket for USB I/O Terminal products : BRK-USB-Y

* Check the CONTEC's Web site for more information on these options.

USB terminal [AIO-160802AY-USB]…1
Interface connector plugs…2
First step guide … 1
CD-ROM *1 [API-PAC(W32)] …1
USB Cable (1.8m) …1
USB Cable Attachment…1

*1 The CD-ROM contains the driver software and User’s Guide.
When connecting the product to an external device, you can use the supplied connector plug. For wiring, strip off approximately 9 - 10mm of the covered part of a wire rod and then insert it to the opening. After the insertion, secure the wire rod with screws. Compatible wires are AWG 28 - 16.

**CAUTION**
Removing the connector plug by grasping the cable can break the wire.

Analog signal input types are divided into single-ended input and differential input. This product uses single-ended input fixed. The following examples show how to connect analog input signals using a flat cable and a shielded cable.

**Single-ended Input**
The following figure shows an example of flat cable connection. Connect separate signal and ground wires for each analog input channel on CN2.

**Single-ended Input Connection (Flat Cable)**

The following figure shows an example of shield cable connection. Use shielded cable if the distance between the signal source and product is long or if you want to provide better protection from noise. For each analog input channel, connect the core wire to the signal line and connect the shielding to ground.

**Single-ended Input Connection (Shielded Cable)**
### CAUTION
If the signal source contains over 1MHz signals, the signal may effect the cross-talk noise between channels.

If the product and the signal source receive noise or the distance between the product and the signal source is too long, data may not be input properly.

An input analog signal should not exceed the maximum input voltage (relate to the product analog ground). If it exceeds the maximum voltage, the product may be damaged.

Connect all the unused analog input channels to analog ground.

The signal connected to an input channel may fluctuate after switching of the multiplexer. In this case, the cable between this product and the signal source can be shortened or a buffer with a high-speed amplifier can be placed between the product and the signal source in order to reduce the fluctuation.

### Analog Output Signal Connection

This section shows how to connect the analog output signal by using a flat cable or a shielded cable.

The following figure shows an example of flat cable connection. Connect the signal source and ground to the CN1 analog output.

**Analog Output Connection (Flat Cable)**

The following figure shows an example of shield cable connection. Use shielded cable if the distance between the signal source and product is long or if you want to provide better protection from noise. For each analog input channel on CN1, connect the core wire to the signal line and connect the shielding to ground.

**Analog Output Connection (Shielded Cable)**

### CAUTION
If this product or the connected wire receives noise, or the distance between this product and the target is long, data may not be outputted properly.

For analog output signal, the current capacity is 1mA (Max.). Check the specification of the connected device before connecting this product.

Do not short the analog output signal to analog ground, digital ground, and/or power line. Doing so may damage this product.

Do not connect an analog output signal to any other analog output, either on this product or on an external device, as this may cause a fault on this product.

When the USB cable is plugged, the analog output signal will be -10V.

### Digital I/O signals Connection

The digital I/O signal can be used as the control signal (external trigger input signal and sampling clock input signal, etc.), too. The following sections show examples.

**Digital Input Connection**

**Digital Output Connection**

**CAUTION**

Do not short the output signals to analog ground, digital ground, and/or power line. Doing so may damage the terminal.

Each input accepts 5V TTL level signals.

The external trigger signal is fixed to the following signal location when using C-LOGGER.

DI00 : External start trigger signal input

* The external stop tripper and external clock cannot be used.
