This product is a USB 2.0 compliant module that extends the digital signal input functions of a PC. This product is a 12 - 24VDC opto-coupler isolated type with input 32ch.

Using the expansion module available as an option can increase the number of input channels. In addition, this product has an attachment that allows this product to be directly attached onto 35-mm DIN rails useful for embedded applications. Windows driver is bundled with this product. Possible to be used as a data recording device for LabVIEW, with dedicated libraries.

**Features**

- Opto-coupler isolated input (supporting current sink output and current source output)
  
  Equipped with opto-coupler isolated input 16ch (supporting current sink output and current source output) whose response speed is 1msec. Common terminal provided per 16ch, capable of supporting a different external power supply. Supporting driver voltages of 12 - 24VDC for input and 12 - 48VDC for output.

- Conforming to the USB1.1 and USB2.0 Standards and supporting the internal and external power supplies
  
  Compatible to USB1.1/USB2.0 and capable to achieve high speed transfer at HighSpeed (480 Mbps).

- Opto-coupler bus isolation
  
  As the USB (PC) is isolated from the input interfaces by opto-couplers, this product has excellent noise performance.

- Trigger monitor function integrated
  
  The CPU inside the module can report status changes (rise and fall) to the host in a minimum cycle of 1ms.

- Easy to increase the number of input channels using an expansion module
  
  Adding optional modules (up to 3 units) can easily increase the number of input channels. The unique structure for connection by stacking enables easy and compact system configuration.

- Screw-less connector plug facilitating wiring and plugging/unplugging
  
  Wiring and plugging/unplugging are easy as the screw-less connector plug is used.

- Capable of being mounted on 35-mm DIN rails
  
  The module is equipped with an attachment for mounting on 35-mm DIN rails on the back, allowing the module to be attached onto and detached from DIN rails.

- LabVIEW is supported by a plug-in of dedicated library VI-DAQ.
  
  Using the dedicated library VI-DAQ makes it possible to create each application for LabVIEW.

*1 Data"0" corresponds to high-level and data"1"corresponds to low-level.

*2 Data"1"corresponds to high-level and data"0" corresponds to low-level.

*3 USB module executes API function by USB communication. The executing time of API function by USB communication is about several msec in practice (Depending on the contents handled by API function, it may be longer than that). Even if the response speed of USB module is based on the environment of the host PC being used.

*4 The USB interface can accommodate up to 127 devices on the bus. As a USB hub itself is counted as one device, however, 127 USB modules cannot be connected.

*5 When using the attached AC adaptor POA200-20-2, it is 0 - 40°C.

Support Software

**Driver Library API-USBP(WDM) (Bundled)**

It is the library software, which supplies command of hardware produced by our company in the form of standard Win32 API function (DLL). Using programming languages supporting Win32 API functions, such as Visual Basic and Visual C++, etc., you can develop high-speed application software with feature of hardware produced by our company. In addition, you can verify the operation of hardware using Diagnostic programs.

CONTEC provides download services (at http://www.contec.com/apiusbp/) to supply the updated drivers and differential files.

Further details may be found in the help within supplied CD-ROM or the homepage of our company.

< Operating environment >

**OS**

**Adaptation language**

Visual Basic, Visual C++, Visual C#, Delphi, C++ Builder

Accessories

**Accessories (Option)**

- Isolated input module (Expansion module) : DI-32(FIT)GY
- AC adapter (input: 90 - 264VAC, output: 5VDC 2.0A) : POA200-20-2
- AC-DC power supply unit (input: 85 - 132VAC, output: 5VDC 3.0A) : POW-AC13GY
- AC-DC power supply unit (input: 85 - 264VAC, output: 5VDC 2.0A) : POW-AD22GY
- DC-DC power supply unit (input: 10 - 30VDC, output: 5VDC 3.0A) : POW-DD10GY
- DC-DC power supply unit (input: 30 - 50VDC, output: 5VDC 3.0A) : POW-DD43GY

Further details of the accessories may be verified in the Web site of our company.

Packing List

*1 The CD-ROM contains the driver software and User’s Guide.
When connecting the Module to an external device, you can use the supplied connector plug. When wiring the Module, strip off approximately 9 - 10 mm of the covering for the cable, and insert the bare wire by pressing the orange button on the connector plug. Releasing the orange button after the wire is inserted fixes the cable. Compatible wires are AWG 24 - 16.

**CAUTION**
Removing the connector plug by grasping the cable can break the wire.

---

**External Input Circuit**

**Input Section**
Figure below shows the input equivalent circuit for the interface section. The signal input section consists of an opto-isolated input (compatible with both current sink output and current source output). Therefore, driving the input section for the Module requires an external power supply with a minimum capacity of approximately 8mA (or 4mA for 12VDC) per input point for 24VDC.

**Input Circuit**

![Input Circuit Diagram](image)

*XX represents the input pin.

---

**Connecting an External Power Supply**

The module can be used via only USB cable if it uses bus power. In this situation, the external power supply is not required.

If you want to control the power consumption of the computer with battery, such as Note PC, you can use self-power to provide power for the module. In addition, if you use expansion modules, the self-power is required.

When you use self-power, please use +5VDC input terminal.

Input plug is 5VDC ±5% input. Laterally operable screw-in type connector is supplied as a standard item. (MC1,5/3-ST-3,5 Phoenix Contact compatible cable: AWG24 - 16)

To supply power using the bundled connector plug (MC1,5/3-ST-3,5), strip the end of the corresponding cable, insert it into the connector plug, then securely screw the plug.

Use an external power supply (available as an option) depending on the operating environment and application.

* The consumed current of DI-32(USB) is +5VDC 450mA(Max.) individually.
* The consumed current of DI-32(FIT)G is +5VDC 150mA(Max.) individually.

**DI-32(USB)**

When using the power supply installable on DIN rail, please use the connector MC1,5/3-ST-3,5 (Phoenix Contact).
Connecting method
To connect the external power supply and USB cable to the unit, take the steps below:
(1) Connect the external power connector to supply power for the USB module.
(2) Connect the USB module with computer using USB cable.
To remove the external power supply and USB cable from the unit, take the steps below:
(1) Remove USB cable.
(2) Remove external power connector, stop power supplying to the USB module.

CAUTION
To use the AC adapter, connect it to the USB module first, then plug the AC adapter's connector into a wall outlet.

When the USB module is not used, leave the AC adapter unplugged.
Continuously using the AC adapter heated affects its life.
Use the AC adapter not in a closed place but in a well-ventilated place not to be heated. The AC adapter heats up itself when loaded heavily. If the AC adapter is exposed to high temperature or used continuously, you should keep the load at about 80% of the maximum load (at 1.6 A for the POA200-20-2).

Connecting with Expansion Accessories
When lacking of digital I/O point used to connecting external device, you have to purchase a new same module, and thus it not only increases cost but also doubles installation space. As this module is designed considering the growth in the number of I/O channels, the connectors on the side face can accept additional modules to save the cost and installation space for expansion.
Expansion modules (options) are available to each type of USB module.

<table>

</tbody>
</table>

Up to three expansion modules can be connected. For example, the combination of the USB module "DIO-16/16(USB)" and three expansion modules "DIO-16/16(FIT)GY" can be used to control up to 64 inputs and 64 outputs through a single USB port.

Points
Up to 3 modules can be connected.
Adding an expansion module requires an external power supply such as the AC adapter (option).
Modules functionally incompatible with the USB module cannot be connected. Use dedicated modules.
