This product is an USB2.0-compliant digital I/O unit that extends the input function of digital signal from the USB port of PC and output signals to SPDT relay contacts. This product is compatible with input digital signals at 12 - 24VDC which features 8 channels of Optocoupler isolated inputs (compatible with current sink output/current source output) and 8 channels of SPDT relay outputs with independent common. Compact design not restricting installation location (188.0(W) x 78.0(D) x 30.5(H)) makes it easy to install the product within the panel or device using DIN rail mounting jigs, or on the floor or wall. Windows driver library is supplied. Possible to be used as a data recording device for LabVIEW, with dedicated libraries.

### Features

Diverse installations such as screw fastening, magnet, DIN rail are possible
Installation on the floor / wall / ceiling is possible by screw fastening, magnet, rubber feet, etc.
In addition, DIN rail mounting mechanism is equipped as standard with the product, making it easy to install the product within the panel or the device.

Compact design not restricting installation location (188.0(W) x 78.0(D) x 30.5(H))
Compact design of 188.0(W) x 78.0(D) x 30.5(H) does not require special installation location

Easy-to-wire terminal connector adopted
Adoption of terminal connector (with screws) enables to achieve easy wiring.

Relay outputs (Form C) with independent common
This product has 8 channels of SPDT relay outputs (Form C) with independent common.
Independent common terminal provided per channel, capable of supporting a different external power supply. High-capacity output rating is designed to be a maximum of 6A 240V (AC), 5A 28V (DC) per channel.

Optocoupler isolated input (compatible with current sink output/current source output)
This product has 8 channels of Optocoupler isolated inputs (compatible with current sink output/current source output) whose response speed is 200μsec, supporting driver voltages of 12 - 24 VDC for input. 8 channels share one common.

Opto-coupler isolation and relay isolation
As the USB I/F on PC is isolated from the input interfaces by opto-couplers and output interfaces by relays, this product has excellent noise performance.

Compatible to USB1.1/USB2.0
Compatible to USB1.1/USB2.0 and capable to achieve high speed transfer at HighSpeed (480 Mbps).

Windows compatible driver libraries are attached.
Using the attached digital I/O driver API-DIO(WDM) makes it possible to create applications of Windows. In addition, a diagnostic program by which the operations of hardware can be checked is provided.

LabVIEW is supported by a plug-in of dedicated library VI-DAQ.
Using the dedicated library VI-DAQ makes it possible to make a LabVIEW application.

Support Software

Windows version of digital I/O driver API-DIO(WDM) [Stored on the bundled CD-ROM driver library API-USBP(WDM)]

It is the library software, and which supplies command of hardware produced by our company in the form of standard Win32 API function (DLL). Using programming languages supporting Win32API functions, such as Visual Basic and Visual C++ etc., you can develop high-speed application software with feature of hardware produced by our company. In addition, you can verify the operation of hardware using Diagnostic programs.

< Operating environment >
OS Windows 7, Server 2008, Vista, XP, Server 2003 .etc
Adaptation language Visual Basic, Visual C++, Visual C# .etc
You can download the updated version from the CONTEC’s Web site (http://www.contec.com/product/device/apiusbp/). For more details on the supported OS, applicable language and new information, please visit the CONTEC’s Web site.

Data acquisition VI library for LabVIEW VI-DAQ (Available for downloading (free of charge) from the CONTEC web site.)

This is a VI library to use in National Instruments LabVIEW. VI-DAQ is created with a function form similar to that of LabVIEW’s Data Acquisition VI, allowing you to use various devices without complicated settings. See http://www.contec.com/vidaq/ for details and download of VI-DAQ.

Packing List

Unit [DIO-0808RN-USB] …1
USB cable (1.8m) …1
USB cable attachment on the main unit’s side (For Mini B connector side) …1
First step guide … 1
I/O connector…4
Rubber feet …4
Magnet …2
CD-ROM *1 [API-USBP(WDM)] …1

*1 The CD-ROM contains the driver software and User’s Guide (this guide)

Block Diagram

Physical Dimensions

Installation Method

Mounting on a DIN Rail
Mounting procedure
(1) Push the fixing hook up using a slotted screwdriver to make it unlockable.

(2) Hook the product from the upper part of the DIN rail, and press the lower part on to the DIN rail.

(3) Push the fixing hook up using a slotted screwdriver to make it lockable.
Removal procedure
(1) Pull down the fixing hook of the unit to unlock it.

(2) With the fixing hook unlocked, pull the lower part of this unit toward you.

(3) By lifting this unit, you can easily remove it from the DIN rail.

Installation Using the Magnet
Attaching the magnet supplied with the product makes it easy to mount or remove the product on or from a metal surface such as steel desk or partition.

⚠️ CAUTION
Do not let the magnet go near objects that can be affected by magnetic fields, such as monitors and floppy disks.
If the product is shifted while mounted on the steel surface, the surface paint may be scratched.
When using the magnet, stack connection is not possible.

Mounting/ removing the magnet
To mount the magnet, press down the entire length of the magnet into its mounting hole while pushing the magnet in the direction of arrow 1. Next, slide the magnet in the direction of arrow 2 to fix it in position.

To remove the magnet, slide the magnet in the direction of arrow 1 as shown in the following figure, and then lift it out in the direction of arrow 2.

Desktop Installation
Using the rubber feet
When required to mount the product on the desktop, mount it on a horizontal platform.
The rubber feet can be mounted in their mounting holes as shown in the following figure.

Wall Installation
To mount the product on the wall, purchase the commercially available screw (fitting for ⌀3.5) separately.
Mounting onto the steel wall
Mount the product directly onto the steel wall. Pull it gently after mounting to confirm that it will not drop off from the body.

Installation Conditions

Installation orientation
It is possible to mount it in the orientations shown in the following figure. Other orientations would cause problems in usage, such as inadequate heat dissipation.

DIN rail fixation
- Vertical installation
- Horizontal installation

Screws / magnet fixation
- Vertical installation
- Horizontal installation
- Installation on a ceiling

Spacing between the system unit and any surrounding objects
Secure a distance of at least 50mm between the top of the main unit (single use) and any surrounding objects. Do not locate the unit in a fully enclosed housing.

Connecting an Interface Connector
When connecting the unit to an external device, you can use the supplied connector plug. For wiring, strip off approximately 7 mm of the covered part of a wire rod and then insert it to the opening. After the insertion, secure the wire rod with screws. Compatible wires are AWG 28 - 16.

CAUTION
Removing the connector plug by grasping the cable can break the wire.

CAUTION
When using the product in a high temperature environment, cool it by blowing air even when the temperature is within the specified range.
### Signal Layout

#### Signal Layout on the Interface Connector

The unit can be connected to an external device using 10-pin connectors that is provided on the unit face.

#### Connecting Input Signals

**Input Circuit**

The input circuit of interface blocks of this product are illustrated in the above figure. The signal inputs are isolated by Optocouplers (compatible with both current sink type and current source type output). The board therefore requires an external power supply to drive the inputs. The power capacity required for driving each input channel is about 5.1mA when the signal voltage is 24 VDC or about 2.6mA when the signal voltage is 12 VDC.

#### Connecting Output Signals

**Example of Connection**

When the switch is ON, the corresponding bit contains 1. When the switch is OFF, by contrast, the bit contains 0.

**Output Circuit**

The output circuits of interface blocks of this product are illustrated in the above figure. The signal outputs are independent common relay outputs (Form C) using a rated output current of up to 6A 240V (AC), 5A 28V (DC) per channel.

**CAUTION**

When power on, normally open (NO) outputs are OFF status (break status) and normally close (NC) outputs are ON status (make status).

**Connection to the LED**

- **When the output logic bit0 is 1**

As a result, setting output NC-0 to “ON” state (make status), LED1 goes out and LED2 comes on.

- **When the output logic bit0 is 0**

As a result, setting output NO-0 to “ON” state (make status), LED1 comes on and LED2 goes out.
